

Clinical Note

Patient Name: subash

MRN: SCB-47680

Date: 2026-05-19 16:08

Presentation

Patient presents with chest pain and shortness of breath, exacerbated by physical activity, with no known family history of heart disease.

Vitals

No current vital signs available, but previous reports indicate blood pressure ranging from 148/94 mmHg to 128/84 mmHg, heart rate from 92 bpm to 78 bpm, and blood sugar levels from 132 mg/dL to 108 mg/dL.

Investigations

ECG ordered to assess heart electrical activity, with previous ECG showing no acute abnormalities but mild stress-related tachycardia, and previous clinical reports indicating mildly elevated cholesterol and improved glucose regulation.

Treatment Plan

Lifestyle modifications recommended, including a heart-healthy diet, regular physical activity, stress management, and adequate sleep, with a plan to monitor progress and adjust treatment as necessary, noting significant improvement in previous reports with controlled mild hypertension, improved glucose regulation, and overall clinical improvement.
